

ANAS BIN - Malek Religious Institute Tripoli

ID×EA is our international brand, that we use for works we do in the world. It was founded in 2008 when we began to work in Libya. We have done other works in Russia, in Great Britain, Scotland. Concepts in Kenya, KSA, Italy and Croatia.

mzc+ is the brand since 1978, founded by Mario Marchetti and Fabio Zampiero. In 1995 Giuseppe Cangialosi joined to this brand. Our experience is about "tailor made" residential buildings, restoration of listed heritage buildings, industrial buildings in Italy.

ID×EA

www.idxea.com

Visiting a place means understanding its history and its traditions, walking through it, breathing it and lastly learning how to respect it. Realizing a building in a place means re-thinking the landscape, perception and size.

This is an act which entails huge responsibility and also, if well thought out, great respect for the people who will inhabit it and experience it. Which is why we feel we are to some extent the inhabitants of places in the world, where, in addition to designing and realizing architectural buildings, we had the privilege to find new friends.

Over the years our profession has changed because some important projects have given us the opportunity to broaden our knowledge and share human and professional experiences which both enrich and develop our own.

We have found ourselves inside realities which, owing to their location, history and culture, are really rather unusual compared to our everyday opportunities for design and creation.

Genuine challenges where the responsibility of moving in different cultural environments is matched by our enthusiasm in proposing our own very personal way of seeing things.

Giuseppe Cangialosi

- M
- I

23

2003
/07

Water and gas plants of Sacca Serenella island in Murano - Venezia to do an urbanization networks. It's increasing the traditional type of gas, drinking water, telephone, electricity distribution, a new sewerage system employing not-traditional gravity piping has been developed. The excavation sites had high levels of pollutants; so these materials was screened and cemented into a small sphere and reused on site by an innovative process called "pelletizzazione".

- A
- S
- L
- E
- M
- I

28

Design and management of the restoration and renovation work of a residential building for a total of 5 floors, located in Treviso - Italy

- A
- S
- L
- E
- M
- I

24

2014

Palazzo Giacomelli, the representative office of Unindustria Treviso, is the place where exhibitions, conferences and cultural events are hosted. The project involved an important restoration of the frescoes and stuccos of the building at the same time as the intervention aimed at eliminating architectural barriers through the inclusion of an elevator that makes all levels of the building accessible.

- A
- S
- L
- E
- M
- I

29

Design and management of the restoration and renovation work of a residential building for a total of 4 floors, located in Conegliano - Italy.

- A
- S
- L
- E
- M
- I

25

2010

Memory and nature are the common thread underlying a confident and contemporary design approach, aimed at a historically accurate restoration of the main body of the building, with more freedom in the design of the annexes. As far as the interior is concerned, the rigorously accurate restoration of the villas own stylistic and decorative elements is in striking contrast with the spatial simplification of the annexes, although this too is aimed at enhancing the villas superb original features.

- A
- S
- L
- E
- M
- I

30

Design and management of the restoration and renovation work of a residential building for a total of 4 floors, located in Treviso - Italy.

- A
- S
- L
- E
- M
- I

26

2019

Transforming this building into a space for tourist accommodation was the opportunity to discover the artistic content that the building kept under the plaster. At the beginning of the construction site, the building appeared as a palace with a rationalist facade, built around the 1930s, without any valuable decorative content.

other projects

34

2009

On the coast west of the city of Misrata, along a stretch of large sand dunes, the Misrata Resort brings together innovative architecture and design solutions that are radically inspired by Arabic traditions. The central channel becomes the connecting infrastructure and a natural feature for the distribution of the water motif. The element of water, so rare and precious in this part of the world, wraps the resort buildings in its embrace and becomes the centrepiece of the design.
